Data Professional & Software Developer with 8+ years of cross-functional experience in data governance, incident management and automated dashboarding. I have a proven track record of architecting Python and SQL-driven ETL pipelines that eliminate manual bottlenecks, including designing and implementing automated reporting systems at Amazon that recovered 30+ hours weekly and boosted team productivity by 48%. I am currently finalising an MSc in Software Development in Glasgow, offering employers a rare combination of heavy-duty engineering capability (Azure, PostgreSQL, Flutter, Java and Python) and a senior-level understanding of P&L and operational scalability.

Relevant Experience:

Data Engineer & Developer | IntrigueSphere E Learning LLP | Mar 2024 – Aug 2025

- Spearheaded end-to-end data architecture and full-stack development for innovative e-learning and hospitality platform.
- Bridged commercial requirements with technical execution, translating business needs into scalable backend data pipelines.

Senior Compliance Analyst | Amazon | May 2020 – Jan 2024

- Converted a 5-step manual Associate-QA process into a fully automated system using PowerApps and Excel, reducing review time, assignment and metrics updates giving a production boost by 48% per month.
- Designed and implemented an end-to-end reporting automation system that replaced a multi-step manual process involving QA scoring, associate productivity tracking, and Excel-based manager reviews.
- Built custom VBA Macros to allow QA reviewers and associates to instantly evaluate scores and productivity metrics, auto-generate reports, and update a centralized dashboard created using Amazon's internal version of Microsoft Access called Workdocs.
- Adopted across all teams within the process, this automation resulted in an estimated 30 hours/week of manual effort saved and significantly improved team-wide reporting accuracy, speed, and usability.
- Developed a web scraping automation tool with Python and selenium automation to retrieve and evaluate image-based search results—bypassing the need for access to restricted SQL databases that housed sensitive data.
- The solution improved accuracy in similarity matching from 47% to 70%, while ensuring data compliance and maintaining process independence.
- Recognized with the Brainiac Award for this initiative, executed independently from concept to deployment.

Education

MSc Software Development

University of Strathclyde

Sep 2025 – Sep 2026

Relevant Modules: Database Fundamentals & Development, Software Engineering, Object Oriented Programming, Mobile Application Development, Computer Security Fundamentals and Legal/Ethical IT issues.

Bachelor of Arts (B.A)

Osmania University (India)

Jul 2013 – Aug 2016

Other Work Experience:

Operations Manager | Snacks at Work (Hyderabad, India) | Mar 2018 – Nov 2019

- Managed P&L, supply chain logistics and cross-functional team leadership for a B2B start-up.

Customer Service Associate | Amazon (Hyderabad, India) | Jul 2017 – Jan 2018

- Supported Customers with queries related to the orders placed and other queries related to marketplace.

Workshop Manager & Coach | Decathlon Sports India | Jun 2015 – Nov 2016

Skills

- Python
- Java
- SQL
- PostgreSQL
- Dart
- VBA
- ETL Pipelines
- P&L Management
- Microsoft Azure
- Power Apps
- Power BI
- Selenium
- Git
- Flutter
- Workflow Automation
- Incident Management (Sev-1)

Languages

- English – Fluent
- Tamil – Native Speaker
- Hindi – Fluent
- Telugu – Fluent

Interests

Finalist | Strath Inspire Entrepreneurship Challenge | 2025 – 2026

- Developed and pitched and innovative business concept to a panel of industry experts, reaching the final stages of highly competitive university initiative.
- Demonstrated strong commercial acumen, strategic problem-solving ability.

Personal Interests:

- Dedicated practitioner of Martial Arts, cultivating discipline, focus and resilience.
- Passionate about exploring Scottish Highlands, actively maintaining work-life balance.
